

CONTENTS

- 441 **Professor Przemysław Mastalerz**
— Kafarski P.
- REVIEW ARTICLE**
- 445 **Role of the Side Chain Modifications for the Solution Behavior and the Complex-Forming Abilities of Some Aminomethane-1,1-diphosphonic Acids. Relevance to Biological Activity**
— Matczak-Jon E.
- ORIGINAL PAPERS**
- 467 **Studies on the Role of DBU in the Reaction of P(III)–OAr System with Nucleoside**
— Dąbkowski W., Tworowska I., Kazimierzczak Ł. and Michalski J.
- 473 **Mechanism of Decomposition of Quasiphosphonium Intermediates: Borderline S_N1 Character of Alkyl-Oxygen Fission in *sec*-Alkyloxyphosphonium Salts** — Hudson H.R. and Qureshi A.R.
- 481 **Polycations. Part 16. Polyphosphonium Species Containing Phosphorus–Phosphorus Bonds**
— Massone Ch. and Engel R.
- 487 **Tetrahydrofuran, One of the Most Popular Solvents in Organic Synthesis, Is Not Completely Inert** — Makowiec S. and Rachoń J.
- 493 **1-Azidoalkylphosphonates – A Convenient Substrates for the Synthesis of *N*-Alkyl α -Aminoalkylphosphonates** — Gajda T. and Janik D.
- 499 **1-(*N*-Acylamino)alkanephosphonates. Part IV. *N*-Acylation of 1-Aminoalkanephosphonic Acids** — Kudzin Z.H., Depczyński R., Andrijewski G., Drabowicz J. and Łuczak J.
- 515 **A General One-Pot Synthesis of Vinyl-Thiiranes and Conjugated Dienes**
— Maciągiewicz I., Dybowski P. and Skowrońska A.
- 525 **Ferrocene-derived Aminomethanephosphonous Acids. Synthesis of Their Esters and Amides with Polyethylene Glycols and Polyamines** — Lewkowski J. and Skowroński R.
- 529 **Oxidation of Phosphonocysteine and Phosphonohomocysteine. Synthesis of Phosphonocysteic and Phosphonohomocysteic Acids** — Kudzin Z.H., Saganiak M., Andrijewski G. and Drabowicz J.
- 541 **Synthesis of Diphenylphosphine Oxide and Diethyl Phosphonate with 4-Dimethylsila-2-hexen-6-ol Moiety** — Gawdzik B. and Wawrzeńczyk C.
- 547 **The Protonation Site in Aminophosphonates** — Doskocz M., Miziak P. and Gancarz R.
- 553 **Synthesis of New Imidazole Aminophosphine Oxides** — Olszewski T. and Boduszek B.
- 561 **Lipase-Catalysed Resolution of 1-Hydroxyethane-P-phenylphosphinates**
— Majewska P., Kafarski P. and Lejczak B.
- 567 **α,β_3 Antagonists Based on a Central Benzoic Acid Scaffold** — Will D.W., Breipohl G., Gourvest J.-F., Ruxer J.M., Doucet B., Auberval M., Baron R., Gaillard M., Gadek T.R., Knolle J., Stilz H.U. and Peyman A.
- 573 **Solid-State CP/MAS P-31 NMR in Studies of the Aminophosphonic Acids and Esters in Marine Animals** — Jankowski S., Huben K., Paneth P., Ciesielski W., Quin L.D., Vokal B. and Doleneč T.
- 583 **(*E*)-Cinnamic Acid Analogues as Inhibitors of Phenylalanine Ammonia-Lyase and of Anthocyanin Biosynthesis** — Kluczyk A., Szefczyk B., Amrhein N. and Zoń J.
- 593 **α -Aminoalkylphosphonates Induced Apoptosis in Human Tumor Cell Lines**
— Drąg M., Sieńczyk M., Marcinkowska A., Drąg-Zalesińska M., Wysocka T. and Oleksyszyn J.
- 603 **Specific Interactions of Divalent Metal Ions with Phosphonic Analogues of Dipeptide Inhibitors of Proteases** — Gałęzowska J., Sobek S., Drąg M., Mucha A., Kafarski P. and Kozłowski H.
